

Wilkins OSHA Training

July 8, 2018

The Wilkins Group recently completed an Occupational Safety and Health Administration (OSHA) 10-hour safety course at its Richardson headquarters for Texas-based underground construction technicians who also work throughout the Southwest. In addition to the company's weekly safety meetings, and other routine training courses focused on safety, technicians received a refresher and new information from an OSHA-certified trainer through Wilkins' association with the Regional Hispanic Contractors Association (RHCA.) Not only did topics include recognition, avoidance,

abatement and prevention of safety and health hazards in workplaces, but Wilkins techs also received hands-on, tailored training related to digging pits and minimizing drilling, trenching and cable burying hazards.

The Wilkins Group employ experts who are the hands that ensure connectivity that carriers promise. Rather it's emergency response, ongoing maintenance or long-term care; Wilkins installs, maintains and upgrades systems for customers in the communications industry.

The RHCA formerly the Hispanic Contractors Association of DFW was formed in 1995 to address

the needs of one of the fastest growing sectors of the construction industry. RHCA is committed to developing programs and facilitating the resources needed to help contractors reach their potential. With the Occupational Safety and Health Act of 1970, Congress created OSHA to assure safe and healthful working conditions for

working men and women by setting and enforcing standards and by providing training, outreach, education and assistance.
